

PHP Quiz Website Information

- Overall Goal of the quiz
 - The Goal of the quiz is to test the knowledge of PHP Language
 - It allows user to create their account and start answering questions
- Purpose of each question
 - To Test how well the know PHP language
- Audience targeted by your Web site
 - People who like to challenge themselves on their knowledge in PHP
- What stats, if any, are kept and tracked
 - The points gain will be stored in database table named score_board including their name and the time of completion of the quiz
- Project description - major points of your Web application that make it the best at what it does
 - The website requires all participant to signup and play using their own account and gain 1 point for each correct answer they make. They will be given 3 minutes to complete the quiz which contains 7 questions. Once quiz completed, the user will be given an option whether they want to submit their score to the score board (For Player Testing Please Use – email:hanel@gmail.com password: 123 or you can signup)
 - The website also provides administrator access to view the complete information of the structure of the database (For Admin Testing Please Use – email:hanel@gmail.com password: 123)
- Two (2) ideas about how you could improve your website
 - I think the website could be improved by using MVC which something I have tried for the past 2 days but unfortunately I was not able to achieved it due to lack of understanding of fatfreeframework.
